LonSpec™ Configuration Software

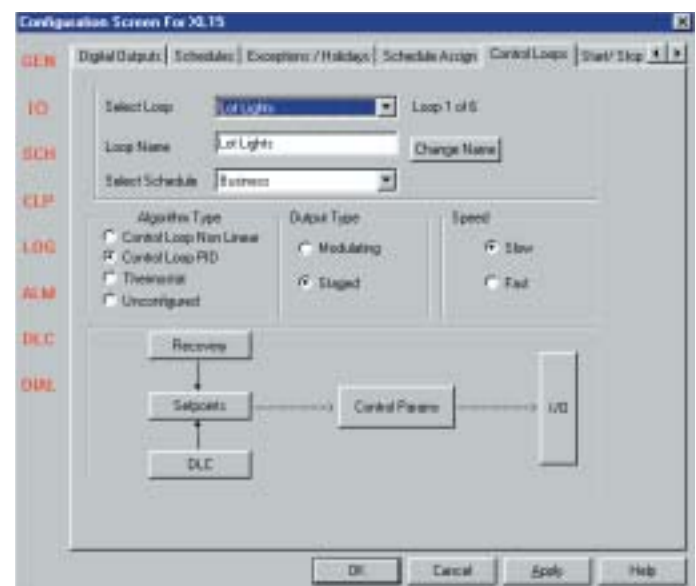

Engineering and start up as simple as 1, 2, 3...

Now there's a simple, low-cost way to customize your small building applications—whether you need to modify the settings for an Excel 10™ unitary controller or T7300 Communicating Commercial Programmable Thermostat, or define a complex sequence of operations for an Excel 15™ controller. LonSpec Configuration Software eliminates the need for engineering or programming expertise. Its Windows®-based intuitive user interface guides you through every step of system set up. A browser-like interface allows simple navigation between controllers, networks, and sites. A floating toolbar with drag-and-drop icons simplifies network creation. And controller-specific setup screens make it quick and easy to customize controllers for your application.

LonSpec is ideal for direct network connection or dial-up operation. Its remote access feature allows convenient modifications to system settings such as schedules, setpoints, or manual control of equipment. Remote access also allows monitoring and diagnosis of system problems without the inconvenience and expense of service calls. LonSpec delivers all the features of an expensive configuration software tool at a fraction of the price.

Network setup screen with drag-and-drop icons displays system components on left, network layout on right.

Control loop screen allows easy configuration of loop parameters.

LonSpec™ Configuration Software

LonSpec Configuration Software

You'll save time and trouble when you engineer your Excel 10™ controllers, Excel 15™ controllers, or T7300 Communicating Commercial Programmable Thermostats with the low-cost LonSpec Configuration Software.

Simple, Point-And-Click Programming

- Excel 10 application-specific controllers come pre-configured to the most common settings—yet allow quick modifications of parameters for your application
- Easily and intuitively configures entire control loops—no line-by-line programming needed
- Simple navigation between controller, networks and sites
- Intuitive dialogue boxes guide user through entire system configuration, including loops, schedules and more

Fast Start Up And Check Out

- Dynamic monitoring of all key parameters on site or remotely

Flexible Applications

- Accommodates fixed or general purpose applications
- Air Handlers
- Heat Pumps
- Fans, pumps
- Cooler or critical point monitoring
- Simple AHU, Chiller or Boiler Control

Easy Changes

- Quickly replicate multiple copies of controllers for repetitive applications

Dial-Up Remote Access

- Change setpoints and scheduling
- Manually control equipment
- Monitor and diagnose systems problems

Single Level Architecture

- Excel 15™ Building Manager
- Excel 15 Plant Controller
- Excel 15 Command Display
- Communicating Commercial Programmable Thermostat
- Excel 10™ Unitary Controllers
